

Dr. Sharon Giese

New York, New York

ASK DR. GIESE

WHAT ARE SOME OF THE FIRST SIGNS OF AGING?

Jowls are one of single biggest giveaways to an aging face. The result of time and gravity, jowls form when the cheeks descend, creating a little pouch of excess tissue that will hide the natural contours of a youthful jawline.

WHAT IS MOST IMPRESSIVE ABOUT YOUR TRAINING?

A fourth generation surgeon, I am trained as a biochemist, pianist and an artist. I am a proud alumnus of Stanford, Georgetown and Northwestern universities, as well as Vassar College. Early in my career I initiated groundbreaking research on the effects of large-volume liposuction to improve pre-diabetes and cardiac risk factors, as well as weight loss.

WHAT STEPS HAVE YOU TAKEN TO INCREASE PUBLIC AWARENESS WHEN IT COMES TO SAFETY AND PATIENT CARE?

My findings have been featured in The Wall Street Journal, The New York Times and Allure, and on network news programs including "The Early Show" and FOX, ABC, CBS and NBC news.

WHY DID YOU BECOME A PLASTIC SURGEON?

It is a great combination of art, beauty and people.

The natural lift by Dr. Sharon

"I am constantly striving to learn new techniques and develop ways to do things better. I see aging beginning with the cheeks. As the cheeks descend, five telltale signs of aging are revealed," she says. "Eyebrows droop, lower lids hollow, nasolabial folds and jowls appear, and the jawline becomes obscured. The natural lift by Dr. Sharon, an innovative program, offers an aging solution for modern women by targeting each of these changes." The core surgical procedure, micro-ultrasound and suction of the jowls and neck can be supplemented with customized facial enhancement. Dr. Sharon will form a strategic schedule to deliver tweaks discreetly. "With the natural lift by Dr. Sharon, the power of choice is in your hands. It will help you put off a facelift, as you wish." E-consults are done exclusively on FabOverFifty.com, a Web site that celebrates age.

CASE STUDY

THE NATURAL LIFT BY DR. SHARON

The treatment's core procedures—micro-ultrasound and liposuction of the neck and jowls—work synergistically to remove excess fat and tighten the skin by activating collagen. This restores the youthful jawline with tighter neck skin. "The results are dramatic, and downtime is minimal. This 62-year-old also had a chin implant and upper-lid blepharoplasty, as well as lip and cheek enhancements," says Dr. Giese.

"new beauty is natural beauty"

"TODAY'S WOMEN WANT TO LOOK LIKE THEMSELVES, ONLY BETTER," SAYS DR. GIESE, WHO STRESSES QUICK, BARELY PERCEPTIBLE IMPROVEMENTS TO LEAVE PATIENTS LOOKING YOUNGER AND FRESHER, AND HELPING THEM FEEL MORE CONFIDENT. THE NATURAL LIFT BY DR. SHARON ACHIEVES JUST THAT WITH STRATEGIC COMBINATIONS OF INNOVATIVE PROCEDURES WITH QUICK RECOVERIES. "WHEN YOU ARE COMFORTABLE WITH YOURSELF, INSIDE AND OUT, OTHER PEOPLE KNOW IT AND SEE IT. COSMETIC SURGERY IS A WAY OF RESPECTING YOURSELF AND YOUR BODY."

ABOUT DR. GIESE

WHAT ARE YOUR AREAS OF EXPERTISE?

I completed my fellowship training in breast surgery and love performing both first breast augmentations and complex revisions. My focus on internal ultrasound has served me well, especially when it comes to large-scale liposuction cases, which can become quite complex. Most recently, I have turned to micro-cannulas for facial rejuvenation. Having published nationally and internationally on breast, body and facial rejuvenation, I enjoy staying current and up-to-date, as it enables me to bring these findings to patients within my own practice, offering what I like to call "modern-day makeovers."

WHAT COSMETIC PROCEDURES HAVE YOU

I am definitely a consumer of my trade. My life is an open book. See my vlog (video blog)—"Confessions of a New York Plastic Surgeon"—on my web site. It is full of insider tips on what I do for myself, friends and family.

WHO ADMINISTERS YOUR BOTOX?

My physician's assistant, Sarah Lazarus.
